

# A new category

Indirect Tax

01 February 2017

*Neil Warren* shares his thoughts in a question and answer article on the introduction of a new category for 'limited cost traders' who will use a rate of 16.5% from 1 April 2017

## Key Points

### What is the issue?

The new limited cost trader category being introduced on 1 April 2017 will affect an estimated 123,000 VAT registered businesses in the UK. So the new rules will need to be fully understood by advisers and clients so that action can be taken as necessary.

## **What does it mean to me?**

The 16.5% category will apply to any scheme user that spends less than 2% of its gross sales on goods or less than £250 in a VAT quarter. There are specific exclusions in the definition of goods that need to be recognised. All scheme users who are limited cost traders will pay more tax because the highest existing rate for any category is 14.5%.

## **What can I take away?**

The loss of tax savings for existing scheme users might mean it is better for the business to either deregister or revert to normal VAT accounting when the new rules are introduced.

The flat rate scheme (FRS) has been an important part of the VAT system since April 2002, and has saved thousands of pounds of tax for many SMEs compared to normal VAT accounting. It has also simplified accounting systems and therefore saved time and money for users, and reduced the risk of VAT errors being made. But that outcome will change on 1 April because an estimated 123,000 out of 411,000 existing scheme users will be classed as limited cost traders and will need to account for VAT of 16.5% on their gross business income rather than 12% or 14% as they do with current arrangements in most cases. The aim of the new rate is to supposedly tackle aggressive abuse of the scheme by labour-only agency workers but it will affect all users who have low spending on goods i.e., including the honest traders. The impact of the proposed changes will need to be considered by advisers on a business by business basis, and I will analyse the key issues in this article.

## **How does the FRS work?**

To set the scene, the FRS means that a business never claims input tax unless an expense relates to capital goods costing more than £2,000 including VAT. A newly registered business can also claim input tax on pre-registration expenses in the

same way as a non-scheme user if it uses the FRS for its first VAT period.

The VAT payable is based on a flat rate percentage being applied to gross business income (but not outside the scope income), with the relevant rate depending on its trading activity.

There are 55 different categories, including two 12% sweep up categories for 'any other activity that is not listed elsewhere' and 'business services that are not listed elsewhere'.

These categories are relevant for a business that does not have an exact DNA match with any of the other categories.

## **Case study: what is a limited cost trader?**

Jim is a health and safety consultant who uses the FRS category of 12% for 'business services that are not listed elsewhere'. This is correct because there is no specific category for health and safety consultants.

With effect from 1 April 2017, Jim will need to consider if he is a limited cost trader on each occasion that he completes a VAT return. Here is a summary of the new rules:

- Jim must calculate his VAT inclusive spending on 'relevant goods' for the quarter including VAT. The phrase 'relevant goods' excludes vehicles, road fuel and motor parts, as well as food, drink and capital items. Supplies of gas and electricity are included in the calculations because they are goods, whereas rent, telephone and Internet charges are services, and so are excluded. As an extra twist, the draft legislation confirms that only expenses that are wholly business are included in the calculations. This means, for example, that a gas or electricity bill with part business and part private use must be excluded completely.
- Note - if Jim operated a transport business, using the FRS category for 'Transport or storage, including couriers, freight, removals and taxis', he would be able to include spending on vehicles, road fuel and motor parts in his calculations as long as he owns or leases a vehicle in his business.
- Jim must check if the amount spent on goods is either less than £250 for the quarter (£1,000 is the annual figure in the draft legislation and would be relevant if a business uses the annual accounting scheme) or less than 2% of

his VAT inclusive sales for the same period. If the answer is 'yes' to either of these two tests, he must adopt the 16.5% category as a limited cost trader. If the answer to both tests is 'no', he will adopt his 12% rate in the usual way.

- See **Limited cost trader calculation**

Image

## LIMITED COST TRADER CALCULATION

Jim is a health and safety consultant and for VAT quarter ending 30 June 2017, his gross sales figure was £10,000 including VAT. His VAT inclusive spending on relevant goods for the same period was £240 (see main article for what items are included and excluded as relevant goods). The business must adopt the 16.5% rate and pay £1,650 of VAT if the £240 spending on goods is:

- Less than 2% of sales (£10,000 in my example i.e., £200); or
- Less than £1,000 a year i.e., £250 in a quarter.

So a total goods figure of £240 including VAT passes the first bullet test but not the second – so the 16.5% rate must be adopted.

## What are the impacts of the proposed changes?

HMRC issued a policy paper on 23 November 2016 titled 'VAT: tackling aggressive abuse of the Flat Rate Scheme'. This paper recognises that 'the new 16.5% rate will remove the cash advantage for those businesses with limited costs', i.e. all businesses are affected and not just the supposed tax avoiders. It also revealed some interesting statistics:

- The new limited cost trader category will increase the annual tax yield by £130m.
- Two thirds of FRS users are registered for VAT on a voluntary basis (annual taxable sales are less than £83,000) and HMRC anticipate that the new category will mean that 'many of them may decide to deregister'
- The limited credit for input tax that is evident with the 16.5% rate means that an estimated 4,000 FRS users will revert to normal VAT accounting, i.e., output tax less input tax.
- HMRC quote an average figure of £390 in cost savings for a business that chooses to deregister after 1 April 2017.

So to summarise the above facts, advisers will be faced with three main choices when considering the impact of the new rules – see **Options for clients**.

Image

## OPTIONS FOR CLIENTS

**Deregistration** – the new 16.5% rate gives minimal credit for input tax – effectively £10 for every £1,000 of output tax (for a business with only standard rated sales). If taxable sales of the business are expected to be less than £81,000 in the next 12 months, the owner might decide to deregister, especially if some customers are not VAT registered and cannot claim input tax. This will also avoid the business having to work out whether it is a limited cost trader each quarter.

**Leave the FRS** – a business only needs to have input tax of more than £10 per £1,000 of output tax to be better off with normal VAT accounting i.e., output tax less input tax. This decision should take into account the time saving benefits of the FRS – is it worth paying more tax to retain these benefits? A business must notify HMRC of its decision to leave the scheme (Notice 733, para 12.1).

**Revise strategy for spending on goods** – if Jim in my example of **Limited cost trader calculation** spends £240 on goods each quarter and has income of £10,000 including VAT each quarter, it would be sensible for him to buy all of his goods evenly in three VAT periods if possible, and none in the fourth period. This is because he would only be classed as a limited cost trader in one of the four periods i.e., retaining his 12% rate for the other three periods.

**Calculation** – £960 annual spend on goods for Jim would be £320 in three quarters and nil in the fourth quarter. The quarterly figure of £320 exceeds both £250 and 2% of Jim's gross income of £10,000 so he is not a limited cost trader in these three periods.

## How will the new rules affect builders?

Everyone agrees that the new 16.5% category will not assist the 'simplification' aims of the FRS but it will be even more complicated for builders because the FRS already has a 'goods' twist (or building materials to be precise). If a builder spends more than 10% of his gross turnover on materials, he can use a lower FRS rate of 9.5%. If the material purchases are less than this figure, the FRS rate is 14.5%.

The new 16.5% rate means that if the material purchases (plus spending on other goods) are also less than 2% of total sales or more than 2% of total sales but less than £1,000 a year, the builder must apply the 16.5% rate. A newly VAT registered builder will also get a 1% discount on his relevant category in his first year of

registration, so he might end up with one of six different FRS rates. See ***Builder using the FRS***.

Image

## BUILDER USING THE FRS

Bob the builder registered for VAT on 1 January 2017 and joined the FRS on 1 April 2017. So he qualifies for a 1% discount on his chosen FRS category until 31 December 2017, i.e., his first year of VAT registration.

The only goods Bob buys in his business are building materials. In the VAT quarter ended 30 June 2017, his material purchases were 15% of his gross sales so he used the FRS rate of 8.5%, i.e., 9.5% less 1% discount.

In the following quarter, his material purchases were only 8% of total sales, so he used the rate of 13.5% i.e., 14.5% less 1%. But in the quarter ended 31 December 2017, he only supplied labour (0% material purchases) so he applied the rate of 15.5% i.e., the new rate for limited cost traders less his 1% discount.

In 2018, his material purchases were again 15%, 8% and 0% of total sales in the first three VAT periods of the year, so he applied FRS rates of 9.5%, 14.5% and 16.5% in these periods.

Bob has been required to use six different FRS rates in his first six quarters of VAT registration.

## Conclusion

This article is based on the draft secondary legislation published on 5 December 2016 – HMRC confirmed an eight-week period from this date for affected businesses to make comments. So it is possible that the draft Statutory Instrument might be amended.

HMRC have confirmed that an online tool will enable current and prospective FRS users to determine whether they are limited cost traders, which is very welcome. But I suspect that most users will either deregister or revert to normal VAT accounting.
